## **Assignment-27**

Azure Synapse Analytics, formerly known as Azure SQL Data Warehouse, is a cloud-based analytics service provided by Microsoft Azure. It's a unified analytics platform that integrates enterprise data warehousing and big data analytics. Azure Synapse aims to streamline the process of ingesting, preparing, managing, and serving data for immediate business intelligence and machine learning needs.

## Hands On:

How Azure Synapse can be used to manage all the services linked with with same workspace and resource group. Not only just for Analytics purpose but also for managing the data sources, manipulation of the data, connecting the resources and managing it Azure Synapse can be used.

## **Creating Account:**
